

PROFESSIONAL SUMMARY

Software engineer building applied AI applications end-to-end, combining Python and FastAPI backends, Gemini API structured outputs, and native Android execution in an independent audio product. Backed by verified production delivery at Presage Care (88 merged PRs across Angular and .NET), focusing on reliable model boundaries, low-latency sequencing, and full-stack runtime stability.

TECHNICAL SKILLS

Languages & Frameworks: Python, FastAPI, TypeScript, C#, ASP.NET Core, Angular, Kotlin (Android), RxJS.

AI & Systems Tools: Gemini API, REST APIs, SQL Server, EF Core, Azure DevOps, Git, Capacitor.

Languages: Chinese (Native), English (B2), French (B1).

APPLIED AI & PRODUCT ENGINEERING

Resonova — AI Audio Companion

Mar 2026 – Present

Independent cross-platform AI audio companion that researches topics, generates conversational scripts, and streams audio on Android.

- AI Script Generation & Research:** Non-deterministic model outputs and token cutoffs caused intermittent backend crashes during automated script synthesis. Structured Gemini API generations using strict JSON schemas and explicit typed degradation for truncated responses, paired with fallback parsing for search-grounded research cards to guarantee valid script payloads for downstream audio synthesis.
- Adaptive Content Sequencing:** Built a behavior-aware four-level explore/lock sequencing engine in Python that modulates candidate selection based on real-time skips and interaction history; verified sub-150ms decision latency across a test suite of 5,000+ interaction events.
- Android Background Playback:** Overcame mobile OS background throttling by moving audio playback authority from the hybrid web container into a native Android Kotlin foreground service with system media controls, maintaining playback state synchronized with the Python/FastAPI backend under Android lifecycle constraints.

PRODUCTION SOFTWARE EXPERIENCE

Presage Care — Software Engineer (Internship)

Feb 2026 – Aug 2026 | Paris, France (PariSanté Campus)

Regulated digital healthcare platform delivering clinical monitoring and scheduling software to care institutions across France.

- Enterprise Production Delivery & CI:** Shipped 88 merged production pull requests across three active enterprise repositories (institute portal, patient web app, core backend); built automated CI validation scripts to verify bilingual translation keys across UI templates and enforce work-item linking across regulated releases.
- Weekly Clinical Reporting:** Decoupled clinical report previews from email generation by replacing client-side email HTML scraping with strongly-typed ASP.NET Core JSON contracts consumed by Angular, eliminating preview rendering drift for care facility directors.
- Multi-Patient Scheduling:** Implemented request-sequencing tokens and component lifecycle disposal in Angular/RxJS to eliminate race conditions and memory leaks when care coordinators switch between high-density patient schedules.

EDUCATION

ESIGELEC

Sep 2024 – Sep 2026 | Rouen, France

Master of Science in Software Engineering & Digital Transformation

Coursework completed, internship defense completed on 2026-09-18; degree conferral pending formal academic validation. GPA: 16.45/20 (Rank: 2/16). Awarded Youth Achievement Merit Scholarship.

Hainan Vocational University of Science and Technology

Sep 2020 – Jun 2024 | Haikou, China

Bachelor of Science in Software Engineering

GPA: 3.7/4.0 (Rank: 20/443).
