

SUMMARY

Fullstack Software Engineering MSc student with six months of production Angular and C#/.NET experience across a multi-repo Paris healthtech platform (institute portal, patient web app, identity and backend services). Shipped 88 merged pull requests spanning REST APIs, real-time features, auth/RBAC, and domain-driven backend logic.

TECH STACK

C# • Angular • TypeScript • SQL • EF Core • ASP.NET Core • REST APIs • SignalR • Docker • Azure • Python • Supabase • Unity

EXPERIENCE

Presage Care — Fullstack Software Engineering Intern Feb 2026 – Aug 2026 | Paris (PariSanté Campus)

- Shipped 88 merged pull requests across a production healthcare platform: institute-facing Angular portal, patient/family Angular web app, and ASP.NET Core / EF Core backend and identity services.
- Built Angular portal features end-to-end: patient monitoring workflows, prevention recommendation views, institute admin interfaces, questionnaire-driven dynamic UI, notifications, and calendar screens, integrated with ASP.NET Core BFF-proxied REST APIs via RxJS-driven state, route guards, and RBAC.
- Designed and shipped a Weekly Brief dashboard feature end-to-end: rendered a backend-generated HTML report in the Angular dashboard via DOMParser-based container extraction, and embedded the Google Maps widget in a readonly report mode without breaking the live dashboard.
- Worked in production domain models with Transloco i18n, Angular Material, EF Core/SQL Server data access, and backend hardening fixes across a live, multi-team Azure DevOps codebase.

MangoTV — VR Applications Intern Dec 2023 – Apr 2024 | Changsha, China

- Built Unity C# systems for a multiplayer VR social platform: Mirror networking, Addressables asset loading, HTTP/WebSocket integration, Redis-backed state, and Vivox positional voice.

SELECTED PROJECTS

Resonova — AI Podcast/Radio Companion Personal project

Python • FastAPI • Gemini LLM/TTS • Spotify Web API • Kotlin/Android

- Designed and led development of a full-stack AI radio app — Gemini multi-speaker scripts, streamed TTS synthesis, and a browser player crossfading AI commentary with live Spotify playback (OAuth/PKCE + Web Playback SDK).
- Extended it with a native Android companion (Kotlin/Capacitor) for background playback, Spotify Connect handoff, and session recovery, backed by 600+ automated tests.

Moto Tour Marketplace Oct 2025 – Jan 2026 | Personal project

Angular 20 • ASP.NET Core 8 • EF Core • MySQL • SignalR

- Built a full-stack motorcycle micro-tour marketplace covering tour discovery, booking approval, mock payment, real-time chat, completion, and reviews; chat sends via REST and receives in real time over SignalR hubs, with polling kept as fallback.
- Implemented role-aware booking workflows — participant/motard authorization, transactional seat reservation, refund handling, two-sided completion, and gated reviews.

Dashcam Video Integrity Validator Jan 2026 – Apr 2026 | Personal project

Angular • ASP.NET Core 8 • Supabase • ffmpeg

- Built a video tamper-detection tool using Supabase-stored perceptual-hash timelines, ffmpeg frame extraction, dHash64/Hamming-distance matching, and automated tamper-verdict classification.
- Structured as three independent services (capture client, validator portal, validator API); failed detections auto-classified by root cause (timestamp drift / visual transform / extraction failure) across a five-case tamper matrix.

EDUCATION

ESIGELEC, France — MSc Software Engineering & Digital Transformation, GPA 16.45/20 (rank 2/16) Sep 2024 – Jun 2026

Awarded an ESIGELEC merit scholarship (Youth Achievement)

HVUST, China — B.S. Software Engineering, GPA 3.7/4 (rank 20/443) Sep 2020 – Jun 2024

AWARDS

Malaysia Technology Expo (MTE 2023) Gold + Special Award

China Collegiate Computing Contest (2022–2024) Provincial First Prizes and National Second Prizes

LANGUAGES

English — B2 French — B1 Chinese — Native
