

PENGYU JIE

Rouen, France • Open to paid remote • Email: mamba579jpy@gmail.com • Phone: +33 7 73 12 40 83

Portfolio: <https://rajayoux.github.io> • GitHub: <https://github.com/JayGarland>

Available from Dec 2025 (6+ months) • French residence permit valid until Mar 2027

Summary

Unity/XR developer specializing in real-time 3D, device porting (Pico→NOLOVR), and performance tuning (load-time cuts via Addressables and baked lighting).

Hands-on with Unity 2020/2022, XRI/MRTK, Meta XR, Unity Profiler, and GitHub Actions; tested on Quest 2/3.

Skills

Engines: Unity (2020/2022), XR Interaction Toolkit (XRI), MRTK, Meta XR

Languages: C#, Python, C, SQL, JavaScript, Java

3D & Pipeline: Addressables & streaming, light baking, LODs, batching/culling, asset import hygiene

Tools: Unity Profiler, Git/GitHub, GitHub Actions

Devices/Platforms: Pico (source), NOLOVR (target), Quest 2/3 (personal dev), Windows/Android (publication)

Experience

VR Applications & Rendering Intern — Hunantv.com Interactive Entertainment Media Co., Ltd.

Dec 2023 – Apr 2024 • Changsha, China

Ported **MANGOVR** from Pico to **NOLOVR**: remapped input, adapted camera rigs, and tuned platform-specific settings; coordinated testing and hand-offs with a partner.

Cut scene load time by ~50% (**≈120s → ≈60s**) via Addressables/streaming and baked-lighting refinements (leveraging an existing plugin).

Explored MR scene understanding & occlusion: built a tabletop demo (virtual object with physics/occlusion) for live presentation; documented device limits (no built-in scene understanding; unstable multi-camera) and proposed Meta XR alternatives.

Worked in a VR subgroup (~15) within a ~1,000-staff department; company >5,000 employees.

Software Engineering Assistant — Huapu Zhilian (Beijing) Technology Co., Ltd.

Jul 2022 – Aug 2022 • Beijing, China

Prototyped Unity demos (education/entertainment/tourism): locomotion, interaction, and UI flows in small squads.

Implemented an auto-reply bot (Bing/ChatGPT-style APIs) with logging and basic engagement metrics.

Selected Projects

Auto Reply Bot (open-source) — Python • Docker • Cloud (Jul 2023 – Oct 2023)

Parses subreddit posts/comments with prompt templates and context; integrates image recognition and content generation.

170 GitHub stars; CI via GitHub Actions; containerized deployment. Source: https://github.com/JayGarland/Autoreply_Sydneybot_Reddit

Education

ESIGELEC — Master in Sciences & Technology: Software Engineering & Digital Transformation

(Sep 2024 – Jun 2026, current)

HVUST — B.S. Software Engineering

(Sep 2020 – Jun 2024)

Awards

Malaysia Technology Expo (MTE 2023) — Gold + Special Award | 2023-10

China Collegiate Computing Contest — Provincial First Prize (First Author) | 2023-06

China Collegiate Computing Contest — National Second Prize (First Author) | 2022-08

Provincial Excellent Undergraduate Innovation Training Program — Top 10% | 2023-09
