until March 2027

Summary

Unity/XR developer focused on real-time 3D, rendering and device porting. Practical experience porting a Pico title **MANGOVR** to **NOLOVR** (input remap, camera rigs and platform settings) and iterating MR/VR learning demos. Hands-on with Unity 2020/2022, XRI/MRTK, Meta XR, Addressables, Unity Profiler, and GitHub Actions; tested on Quest 2/3. EN for work; FR daily; native Chinese.

Skills

- **Engines** : Unity (2020/2022), XR Interaction Toolkit (XRI), MRTK, Meta XR
- **Languages** : C#, Python, C, SQL, JavaScript, Java
- **3D & Pipeline** : Addressables & streaming, light baking, LODs, batching/culling, asset import hygiene
- **Tools** : Unity Profiler, Git/GitHub, GitHub Actions
- **Devices/Platforms** : Pico (source), NOLOVR (target), Quest 2/3 (personal dev), Windows/Android (publication)

Experience

VR Applications & Rendering Intern — Hunantv.com Interactive Entertainment Media Co., Ltd.

Dec 2023 – Apr 2024 • Changsha, China

- Ported **MANGOVR** from **Pico** to **NOLOVR** by remapping input actions, adapting camera rigs and adjusting platform-specific settings; coordinated testing and hand-offs with a partner company.
- Reduced scene load time from approximately 120 s to around 60 s using Addressables/streaming and light-baking refinements (leveraging an existing plugin).
- Explored MR *scene understanding* and occlusion: prototyped a table-top demo (virtual object with physics/occlusion) for live presentation use; identified device limits (provided AR camera lacked built-in scene-understanding; multi-camera feeds were unstable) and proposed Meta XR-based alternatives.
- Worked within a VR subgroup of ~15 in a department of about 1 000 staff; the company has over 5 000 employees.

Software Engineering Assistant — Huapu Zhilian (Beijing) Technology Co., Ltd.

Jul 2022 – Aug 2022 • Beijing, China

- Prototyped Unity demos for education, entertainment and tourism, implementing locomotion, interaction and UI flows in small teams.
- Implemented an auto-reply bot (Bing/ChatGPT-style APIs) with logging and basic metrics to support engagement experiments.

Selected Projects

Auto Reply Bot (open-source) — Python • Docker • Cloud

Jul 2023 – Oct 2023

- Parses subreddit posts/comments; uses prompt templates with context; integrates image recognition and content generation.
- Approximately **170 GitHub stars**; continuous integration via GitHub Actions; containerized deployment.
- Source available on GitHub

https://github.com/JayGarland/Autoreply_Sydneybot_Reddit.

Education

ESIGELEC — Master in Sciences & Technology: Software Engineering & Digital Transformation

Sep 2024 – Jun 2026 (current)

HVUST — B.S. Software Engineering

Sep 2020 – Jun 2024

Awards

- **Malaysia Technology Expo (MTE 2023)** — Gold + Special Award Jul 2024
- **China Collegiate Computing Contest** — Provincial First Prize (First Author) Jun 2023
- **China Collegiate Computing Contest** — National Second Prize (First Author) Aug 2022
- **Provincial Excellent Undergraduate Innovation Training Program** — Top 10 % Sep 2023
